

Maro Radović

Lead Forward Deployed Engineer · AI Solution Architect

Swindon, UK · 07846 155 550 · maro.radovic12@gmail.com

British Citizen · SC Cleared · github.com/commitBlob

Professional Summary

AI Solution Architect and Lead Forward Deployed Engineer with 11+ years in software engineering and 2+ years shipping **production GenAI inside the UK Government**. Embedded in DSIT's AI Engineering Lab — the first UK Gov programme to scale Claude Code and other AI coding assistants across **1,000+ engineers in multiple departments** (UKHSA, Home Office, HM Treasury, UK Export Finance, NHS Scotland & England, HMRC, MHCLG, MHRA). Pre-sales contributor on **£12m+ of UK public sector AI engagements**. Took Cafcass AI Scribe to production at **1,500+ advisors and 80,000+ letters/month** (Gartner Eye on Innovation runner-up). Known internally as the **"prompt whisperer"**. MSc Artificial Intelligence (Bath).

Experience

Lead Forward Deployed Engineer & Implementation Lead — DSIT | Version 1

Dec 2025 – Present · Remote, UK · Concurrent AI Solution Architect remit from May 2026

Embedded as the senior technical face across the UK Government's flagship AI-assistant adoption programme; hold two roles concurrently — leading the Forward Deployed Engineer community and owning the Adoption & Foundation workstream every department passes through.

- **Built and shipped reusable Claude Skills** (Adoption Assessment, Adoption Plan, MaroBot) that ingest call transcripts and questionnaire data to auto-produce department-tailored deliverables — saving ~180 hours of manual analysis and, more valuably, holding output structure, REACH measures and bespoke sections consistent across every FDE, eliminating the senior-review bottleneck.
- **Codified the Workstream A operating model from a blank sheet** — stakeholder mapping, REACH-based readiness assessment, adoption planning — now the standard procedure every FDE follows entering a new department.
- **Coached five Senior FDEs from shadowing to independent department lead in a single quarter** using a structured "see one, do one, teach one" model.
- **Authored a complete .NET legacy-modernisation workshop** (slides, prompt playbook, copy-paste patterns) end-to-end with Claude Code in hours, delivered to senior .NET engineers at UKHSA — outside my home tech stack.
- **Bootstrapped the public DSIT AI Engineering Lab repository** (quality metrics, incident-response playbooks, guardrails, manager guides), shaped to GDS guidelines — codifying repeatable deployment patterns for cross-government reuse.
- **Drove V1's positioning for the programme extension** (up to £8m, 7 months) across 1,000+ engineers and multiple departments (UKHSA, Home Office, HM Treasury, UK Export Finance, NHS Scotland & England, HMRC, MHCLG, MHRA).
- **Department for Business and Trade (DBT) AI Factory** – technical review of production-grade RAG based HR policy solution (£2m).
- Awarded an Outstanding quarterly rating in Q1 2026 – Version 1's top performance band, given to 0.5% of colleagues per quarter.

"His credibility in AI and architecture is helping strengthen the programme's technical direction and overall customer confidence." — John O'Neill, Tech Principal (Central Architecture), Version 1

AI Technical Lead / Senior AI Engineer — Cafcass | Version 1

Apr 2024 – Dec 2025 · Remote, UK

Led Scribe, a GenAI letter-generation platform, from PoC to production for England's family-courts advisory service.

- **Shipped Scribe to production at 1,500+ advisors and 80,000+ letters/month** — Gartner Eye on Innovation runner-up; Digital Leaders 'AI for Ethics, Trust and Governance' shortlist.
- **Built production evaluation frameworks for LLM output**: cosine similarity and ROUGE for summarisation; Flesch-Kincaid and SMOG for child-appropriate readability.
- **Defined the Cafcass AI capability roadmap** and designed the V1 AI Training Plan for Software Engineers — embedding GenAI, RAG, prompt engineering and evaluation literacy organisation-wide.

- **Embedded responsible AI in production** — access controls, audit trails, privacy-by-design, UK data residency; aligned to ATRS, the EU AI Act and the Government Service Standard. Implemented multi-modal (text and audio) output for neurodiverse children and families facing English-language barriers.
- **Shaped GenAI/RAG architecture, evaluation strategy and responsible-AI governance** for the Home Office AI Delivery Partner bid (up to £3m).

Senior Software / Frontend Engineer — Home Office, MoJ, HMCTS | Version 1

May 2021 – Apr 2024 · Remote, UK

- **Owned authentication and document upload** on the Home Office MAPPS multi-agency offender-management platform projected to save £76m/year; led secure integration of legacy systems into a unified architecture.
- **Led modernisation of the HMCTS Small Claims Court portal** as subject-matter expert across a 17-engineer Java/JavaScript team — optimised a Node.js application of hundreds of pages, built a reusable component library, and realigned the architecture from Java-influenced to modern TypeScript. Won Version 1's Innovation Project of the Year (Excellence Awards 2022).

Earlier roles (2012–2021)

Senior Software Developer & Research Lead, Ntegra — delivered a knowledge-discovery portal for 8,000+ global users via a RAG-style pipeline (Azure QnA Maker, LUIS). Prior: SMS Environmental · Smiths News · 3iLLs · Ragusa Telekom · Studio Beluga.

Selected Public Artefacts

- [“The Other Side of ROI in AI: Managing Mistakes”](#) — Version 1 thought-leadership blog (2025); a cost-of-AI-errors framework now embedded in my evaluation work.
- [github.com/commitBlob/playground — GDS-MCP](#) — prototype MCP server that generates accessible GOV.UK-style component patterns.
- [github.com/maro-v1/dotnet-modernisation](#) — Claude Code-driven .NET legacy-modernisation workshop.
- [github.com/maro-v1/custom-instructions](#) — Claude and GitHub Copilot custom-instructions workshop.

Technical Skills

AI / GenAI: Claude, Claude Code, Claude API, Claude Skills authoring, MCP, agentic patterns, advanced prompt engineering, evaluation frameworks (cosine similarity, ROUGE, readability metrics), RAG, LangChain, LangGraph guardrails, responsible AI, PyTorch, GitHub Copilot, Amazon Kiro.

Languages & frameworks: Python, TypeScript, JavaScript, Node.js, Angular, React.

Cloud & delivery: Azure (AI Services, B2C, OpenAI), AWS, Docker, Kubernetes, CI/CD with static analysis, OWASP and accessibility gates.

UK Government standards: GDS Service Standard, Technology Code of Practice, NCSC guidance, Cyber Essentials Plus, Government Security Classifications, ATRS, EU AI Act.

Education

Multiverse Transformative Leadership Programme (2026) - Distinction.

MSc Artificial Intelligence - University of Bath (2023).

BSc Information Technology - RIT Croatia (2014).

Certifications & Awards

Anthropic Academy (2026): AI Fluency · Claude 101 · Claude Code in Action · Building with the Claude API · Agent Skills · Model Context Protocol · Claude Cowork.

Other: GitHub Copilot GH-300 (2026) · V1 AI Ready Architect (2025) · LangChain & LangGraph for AI Agents (2025) · PyTorch Ultimate (2024) · Azure AI-900 / AZ-900.

Awards: Gartner Eye on Innovation runner-up & Digital Leaders ‘AI for Ethics, Trust and Governance’ shortlist (Cafass Scribe) · V1 Excellence Awards 2022, Innovation Project of the Year.
